WELCOME TO JEKYL

welcome to jekyll's step-by-step tutorial. This tutorial takes you from not having some front-end web development experience to building your first Jekyll site from scratch without relying on the default gem-based theme.

Installation

Jekyll is a Ruby gem. First, install Ruby on your machine. Go to [Installation](#) and follow the instructions for your operating system.

With Ruby installed, install Jekyll from the terminal:

```
terminal
gem install jekyll bundler
```

Create a new **Gemfile** to list your project's dependencies:

```
terminal
bundle init
```

Edit the **Gemfile** in a text editor and add jekyll as a dependency:

V4.2.2

GITHUB

Installation

✎ Improve this page

Jekyll is a **Ruby Gem** that can be installed on most systems.

Requirements

- **Ruby** version **2.5.0** or higher, including all development headers (check your Ruby version using `ruby -v`)
- **RubyGems** (check your Gems version using `gem -v`)
- **GCC** and **Make** (check versions using `gcc -v`, `g++ -v`, and `make -v`)

Guides

For detailed install instructions, follow the guide for your operating system.

- macOS
- Ubuntu
- Other Linux
- Windows
